

Nimble Streamer Helps Media Content Providers Create Streaming Networks Cost-Effectively and Easily by Utilizing Azure's Worldwide Scalability

MICROSOFT AZURE ISV PROFILE: NIMBLE STREAMER

Nimble Streamer server software and WMSPanel web-based SaaS is built for live and video-on-demand media streaming. Its consumers are hosting providers and content owners, content delivery networks, and media startups. These products help transform, deliver, and protect content by building and controlling custom delivery networks based on the Azure cloud.

WHAT WE OFFER

Nimble Streamer is a freeware lightweight media server. It's capable of live streaming via ABR MPEG-DASH, ABR HTTP Live Streaming, Real Time Messaging Protocol, Icecast, and MPEG-TS. The ABR VOD feature set allows easy transmux from MP4 content to HLS and MPEG-DASH. All with no license fees.

The WMSPanel SaaS platform allows easy configuration to any number of Nimble Streamer servers. This includes the definition of incoming live streams and the setup of outgoing streams, their parameters and their ABR settings. There's also an easy-to-use wizard to set up VOD streaming.

A paywall framework allows businesses to protect and monetize content. This includes hotlink protection, geographical location restriction, and pay-per-view feature sets. They may be applied, both together and apart, to any number of Nimble Streamer servers, while the API allows flexible deployment.

The WMSPanel web service may collect statistical data from multiple Nimble Streamer instances. This gives the content owner a multidimensional picture of the streaming audience. White label access provides display flexibility for the delivery network operator in order to show its customers the designated metrics.

WHAT OUR CUSTOMERS ARE SAYING

"Cires21 built an efficient live radio streaming infrastructure using Nimble Streamer for streams ingest and WMSPanel for processing and displaying statistics for our customers." – Ernesto Saez, CEO, Cires21

Visit nimblestreamer.com to learn how to create your own streaming infrastructure using Nimble Streamer and Azure.

Microsoft Azure

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

KEY USE CASES

WEB APPLICATIONS

Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

CLOUD STORAGE

Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

BIG DATA & HPC

Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

MOBILE

Accelerate your mobile app development by using a backend hosted in Microsoft Azure. Scale instantly as your install base grows.

MEDIA

Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

FLEXIBLE APPLICATION MODEL

Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft's promise to let you build using any language, tool, or framework.

ALWAYS ON, ALWAYS HERE

Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

DATA CENTER WITHOUT BOUNDARIES

Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

GLOBAL REACH

With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
